

WithSecure™ Elements Endpoint Security

Advanced security for your computers, servers, and mobile devices

WithSecure™ Elements Endpoint Security enables you to stay resilient against cyberattacks with award-winning protection, detection, and response against modern malware and ransomware, phishing, and data breaches. It combines WithSecure™ Elements Endpoint Protection (EPP) and WithSecure™ Elements Endpoint Detection and Response (EDR) solutions into one synergistic package with centralized management. Elements Endpoint Security is continuously tested by the most reputable independent testing organizations. Its advanced protection

capabilities automatically prevent and stop malware execution at scale, and it includes advanced tools like patch management and WithSecure™ Rollback. Broad Context Detection™ acts as the core of our detection and response capabilities, finding even the most sophisticated threats and enabling quick response actions.

Elements Endpoint Security helps you meet the regulatory requirements of PCI, HIPAA, and GDPR that necessitate breaches to be reported within 72 hours.

WithSecure™ Elements Endpoint Protection (EPP)

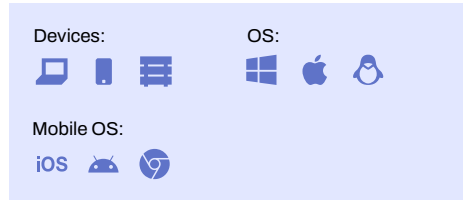

Elements EPP provides autonomous protection to stop known threats ranging from ransomware to zero-day vulnerability exploits. It uses advanced machine learning and real-time threat intelligence to minimize your attack surface and prevent malware, without manual investigation.

Multi-layered security approach for automated prevention and remediation of security threats, including heuristic and behavioural mechanisms as well as AI.

Security hardening tools for minimizing the attack surface, such as patch management,

application control, and control over disallowed content.

EPP protects your Windows, macOS and Linux computers; iOS, ChromeOS, and Android mobile devices; and Windows, Citrix, and Linux servers.

WithSecure™ Elements Endpoint Detection and Response (EDR)

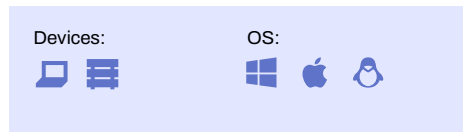

While our EPP protects against cyberattacks at scale, Elements EDR detects the most advanced threats that can evade EPP and enables the fast investigation of incidents. Elements EDR provides visibility into suspicious activity across all your endpoints, as well as threat detection, visual investigation tools, and AI-guided response actions.

Broad Context Detections™ provide centralized visibility into threats across all your devices, while minimizing noise, to enable investigation, forensics, and threat validation.

Contain advanced and targeted attacks by using clear, actionable guidance from **Luminen™** **GenAI** assistant and ready-made automated response actions.

In challenging cases, our elite threat hunters can validate and investigate detections on demand with the additional **WithSecure™ Elevate** service.

Industry-leading capabilities across Windows, macOS, and Linux computers, also including servers.
