

# WithSecure™ Elements Identity Security

Prevent major impact  
from credential theft

## Protect your most targeted assets: your users

Attackers are shifting focus to identities as organizations are adopting cloud services that can be accessed over the internet by their remote workforce. New attacks in a new domain mean new training needs for experienced security analysts. Endpoint Security alone no longer provides complete visibility across modern IT environments.

WithSecure™ Elements Identity Security is an Identity Threat Detection and Response (ITDR) solution that helps you address these

challenges as part of WithSecure™ Elements Extended Detection and Response (XDR). Elements Identity Security detects potentially compromised users and the credentials they have used to access Microsoft Entra ID. Analysts can quickly understand the activity and take the relevant next steps to minimize attackers' access to sensitive data. Ready-made quick response actions include ending current sessions, resetting passwords, and blocking user access to stop an attacker in their tracks.

# Protect your organization against identity-based attacks

**Secure your remote workforce** against the rise in identity-based attacks — cost-effectively.

**Integrates with Microsoft Entra ID**, the most widely used cloud-based Identity and Access Management (IAM) service — used by most to access many 3rd party services.

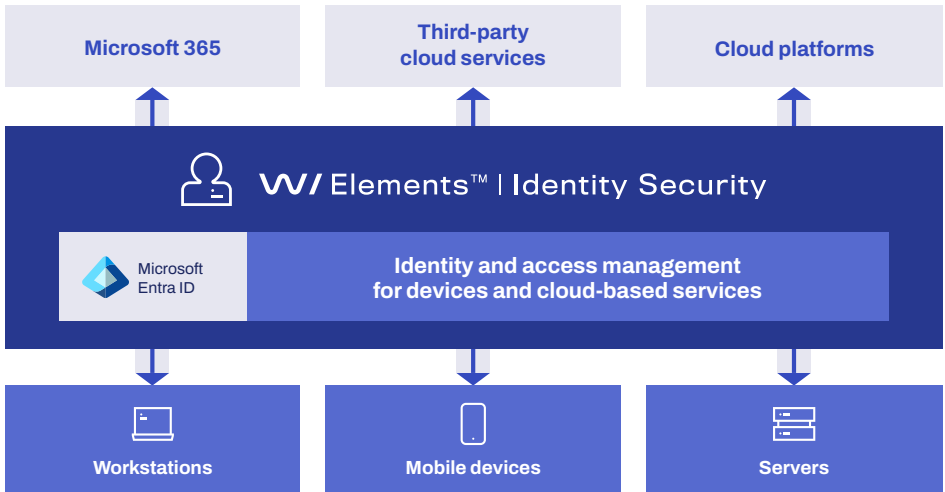

**Detect the use of stolen user credentials** by identifying risky users and sessions, when credentials are being used to access Microsoft 365 or other cloud platforms.

**Broad Context Detection™ aggregates all activity detected** from a potentially compromised user and enables the administrator to take quick response actions with built-in guidance.

**Protect your Entra ID Single Sign-On (SSO)** from attacks targeting user identities to prevent unauthorized access to company data hosted in cloud applications.

**Do more with limited resources** by easily managing your security with Elements XDR — using Luminen GenAI assistant and accessing flexible Co-Security Services whenever needed.
